

Get QCA Datasets

Description

Automatically downloads raw and calibrated QCA datasets hosted on the COMPASSS.org server. Can select between csQCA, mvQCA, and fsQCA. Returns datasets as a list, along with hyperlink selections indicating the author name, year, and dataset type (raw versus calibrated).

Usage

```
get.qca.datasets(csQCA = FALSE, mvQCA = FALSE,  
                 fsQCA = FALSE)
```

Arguments

csQCA if TRUE, get csQCA datasets

mvQCA if TRUE, get mvQCA datasets

fsQCA if TRUE, get fsQCA datasets

Value

eturns a named list with up to three nested elements, one for each of csQCA, mvQCA, and fsQCA (corresponding to argument values supplied by the user). Within each nest, there is a list whose items have one sub-item containing a hyperlink stub and one sub-item containing the corresponding dataset.

Author(s)

Chris Kroglund (<http://ckro.gs>; ckroglund@berkeley.edu)

Examples

```
# Get all csQCA datasets  
get.qca.datasets(csQCA=TRUE)  
  
# Get all csQCA and mvQCA datasets  
get.qca.datasets(csQCA=TRUE, mvQCA=TRUE)
```
